The Neck

is the region of the body
that lies between the
lower margin of the
mandible above and
the suprasternal notch
and the upper border
of the clavicle below

NERVES OF THE NECK

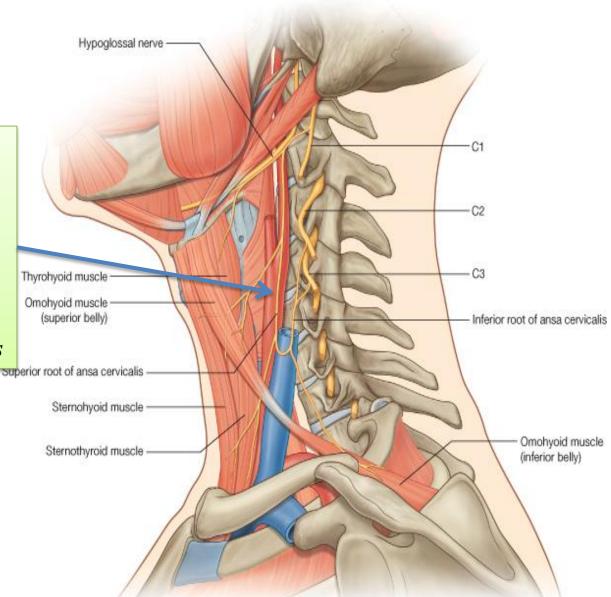

Cervical Plexus

➤ Is formed by the anterior rami of the first four cervical nerves.

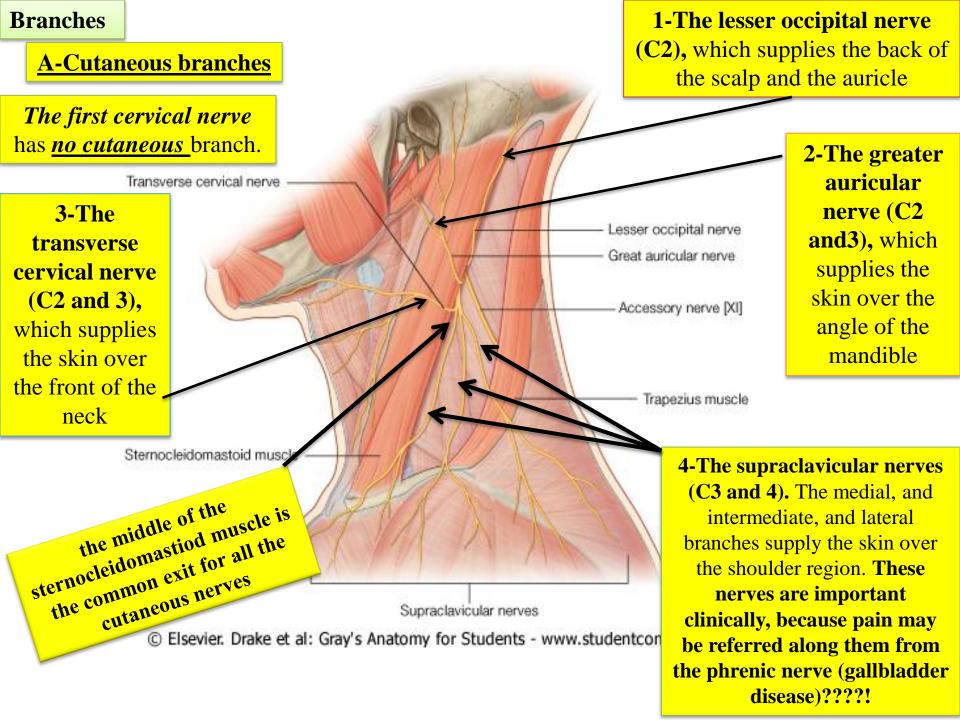

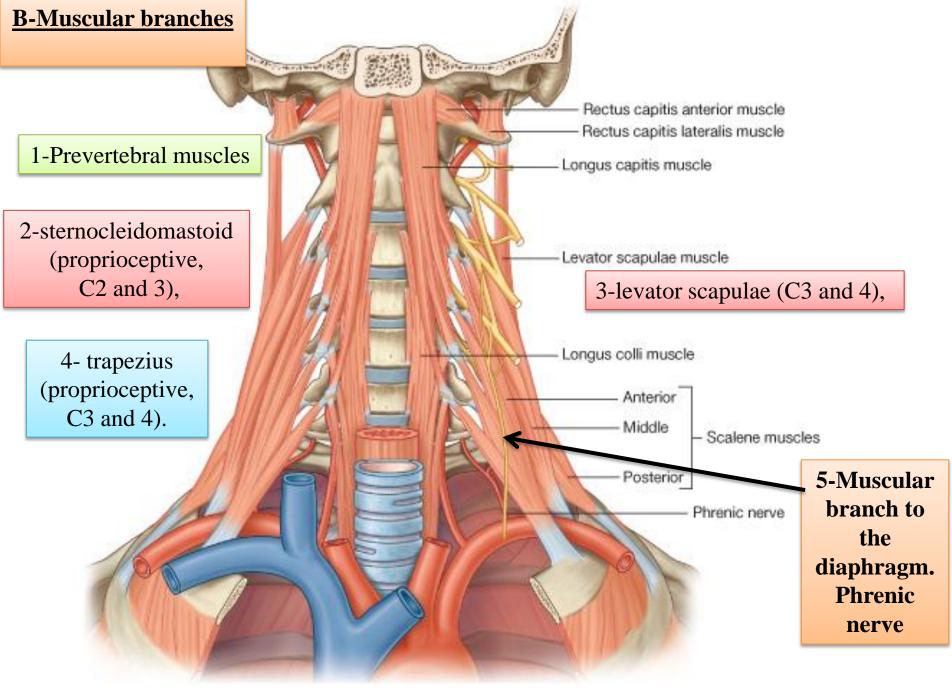

© Elsevier. Drake et al: Gray's Anatomy for Students - www.studentconsult.com

© Elsevier. Drake et al: Gray's Anatomy for Students - www.studentconsult.com

© Elsevier. Drake et al: Gray's Anatomy for Students - www.studentconsult.com

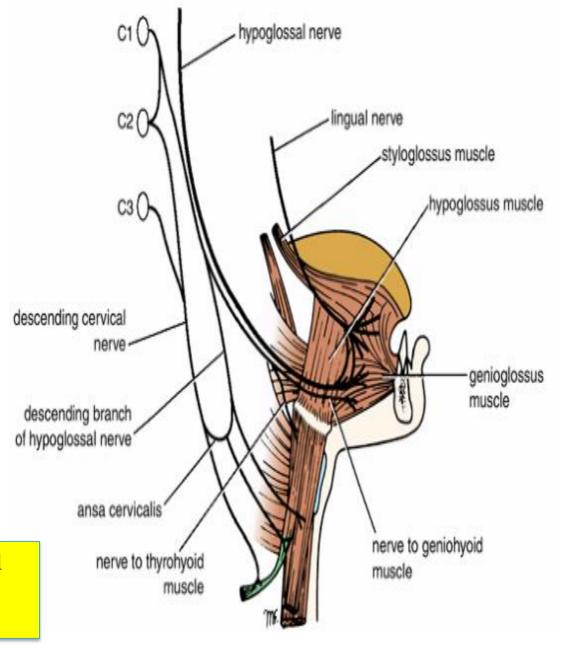

6-A branch from C1 joins
the hypoglossal nerve.
Some of these C1 fibers later leave
the hypoglossal as the descending
branch
which unites with the descending
cervical nerve (C2 and 3)

to form the ansa cervicalis

The first, second, and third cervical
nerve fibers within the ansa
cervicalis supply:

1- omohyoid,2-sternohyoid3-sternothyroid muscles

Other C1 fibers within the hypoglossal nerve leave it as the nerve to the thyrohyoid and geniohyoid.

SUPERFICIAL VEINS OF THE NECK

SUPERFICIAL VEINS OF THE NECK

1-External Jugular Vein

The external jugular vein

begins

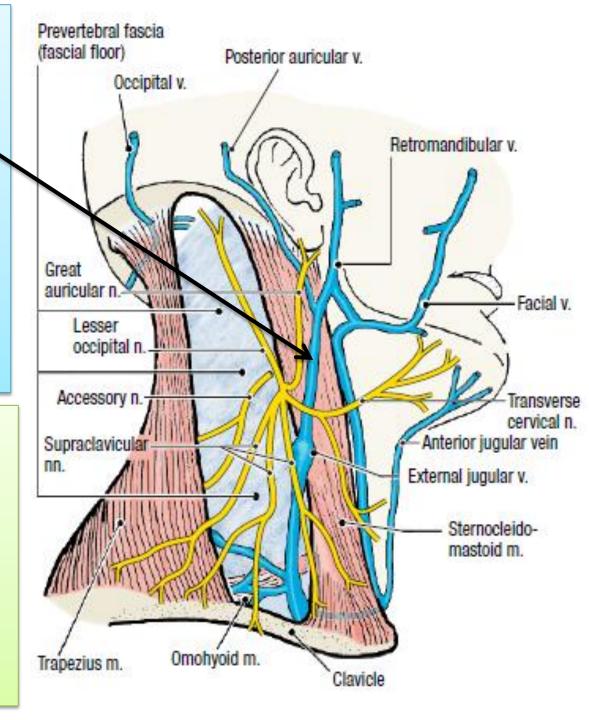

just behind the angle of the mandible

by the union of
the posterior auricular vein
with The posterior division of the
retromandibular vein

- ➤ It descends obliquely <u>across the</u> <u>sternocleidomastoid</u> muscle
- ➤ Pierces the deep fascia and drains into the subclavian vein
- It varies considerably in size, and its course extends from the angle of the mandible to the middle of the clavicle.

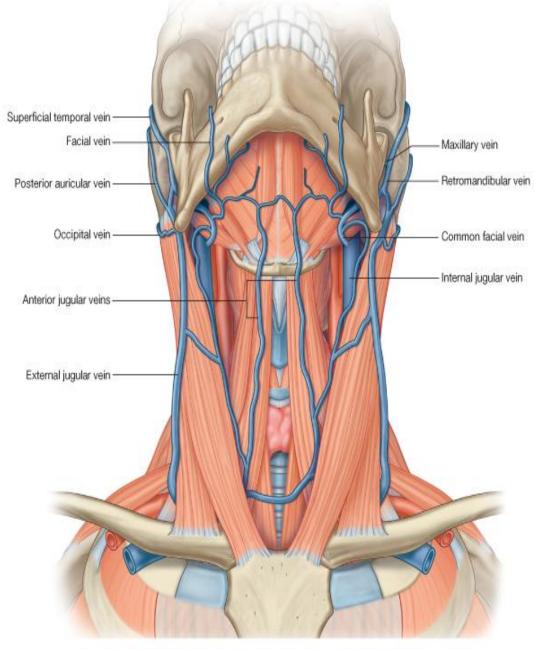

Tributaries:Transverse cervical ,Suprascapular,

posterior external jugular and anterior jugular vein

Anterior Jugular Vein

- The anterior jugular vein begins just below the chin
 - ➤ It runs down the neck close to the midline.
- ➤ Just above the suprasternal notch, the veins of the two sides are united by a transverse trunk called the jugular arch. Drains into the external jugular vein.

Figure 8.154 Superficial veins of neck.

Veins of the Face and the Neck Facial Vein

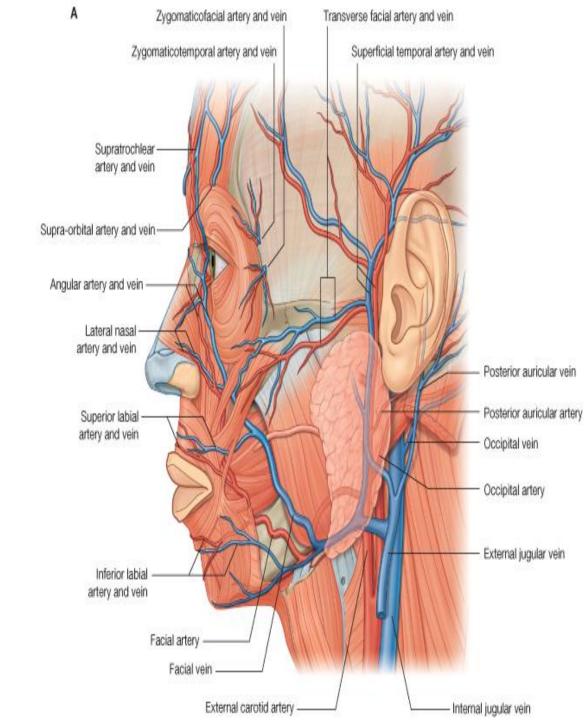

is joined by the anterior division of the retromandibular vein, and drains into the internal jugular vein.

Superficial Temporal Vein

The superficial temporal vein is formed on the side of the scalp enters the parotid salivary gland, where it joins the maxillary vein to form the retromandibular vein.

Maxillary Vein

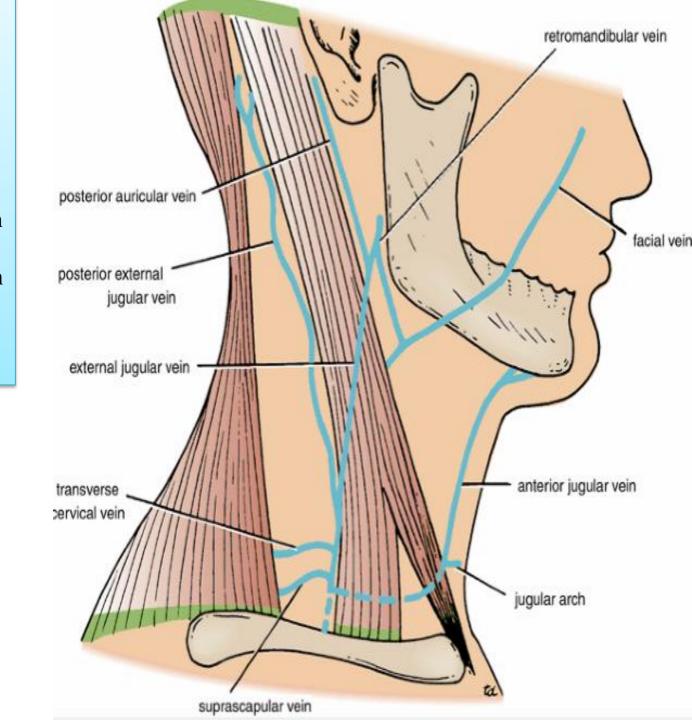

The maxillary vein is formed in the infratemporal fossa from the pterygoid venous plexus The maxillary vein joins the superficial temporal vein to form the retromandibular vein.

Retromandibular Vein
is formed by the union of
the superficial temporal
and the maxillary
On leaving the parotid

On leaving the parotid salivary gland, it divides into:

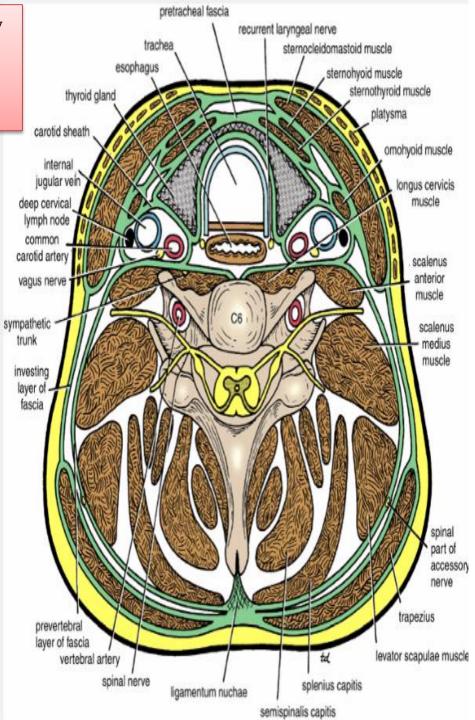

an anterior branch, which joins the facial vein, a posterior branch, which joins the posterior auricular vein to form the external jugular vein.

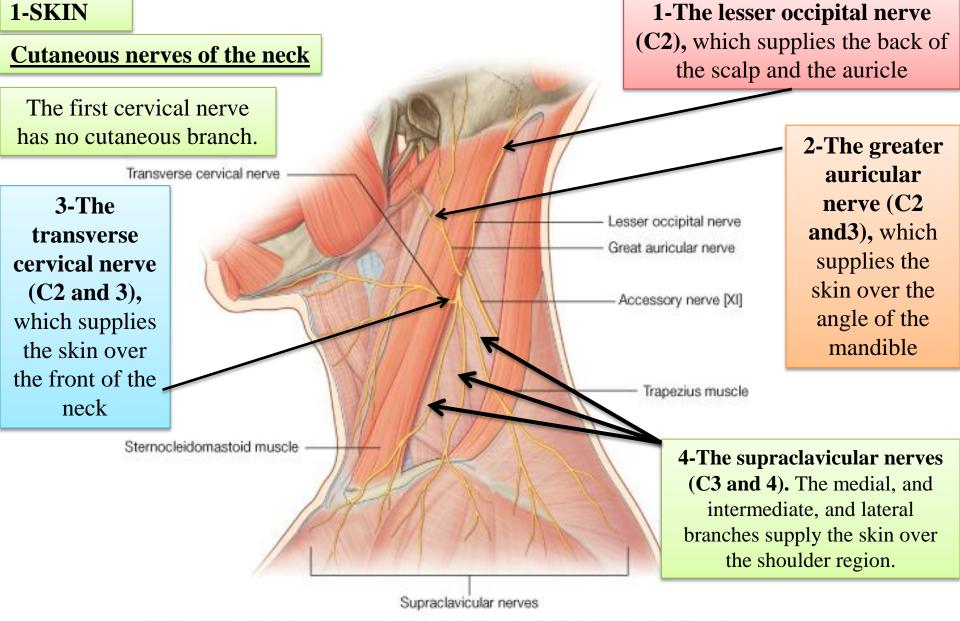

The neck is surrounded by **1-Skin**

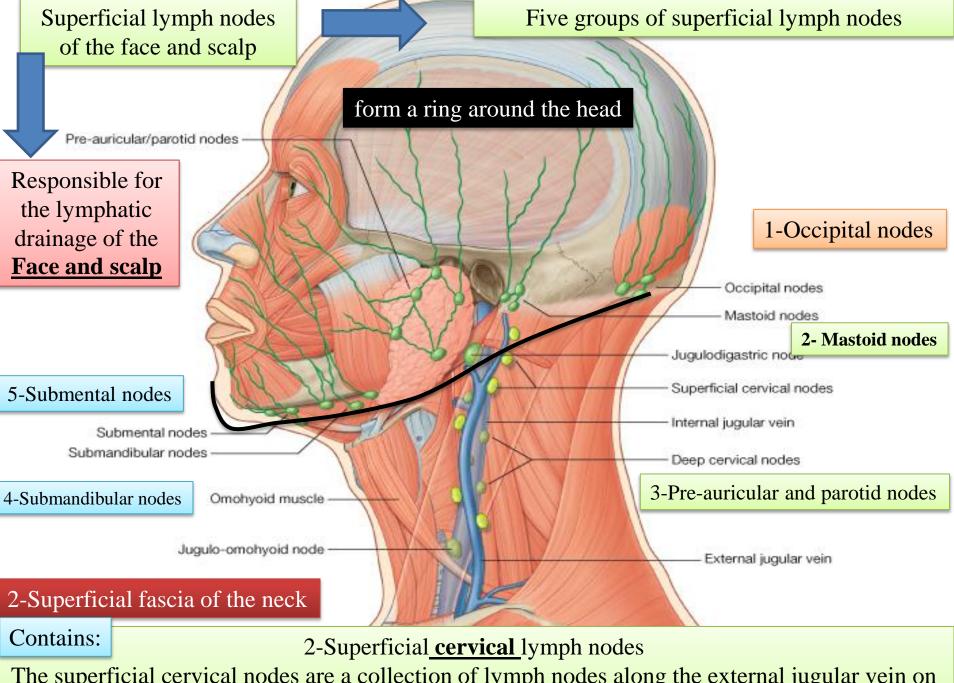

2-Superficial fascia

3-Deep fascia

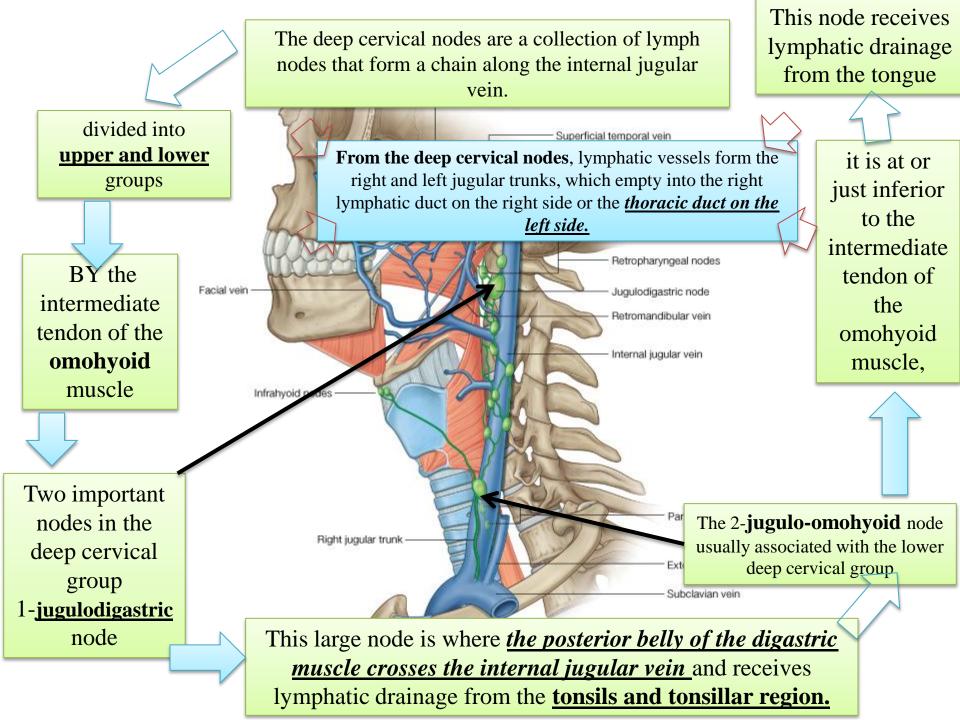

© Elsevier. Drake et al: Gray's Anatomy for Students - www.studentconsult.com

The superficial cervical nodes are a collection of lymph nodes along the external jugular vein on the superficial surface of the sternocleidomastoid muscle

3-Deep Cervical Fascia

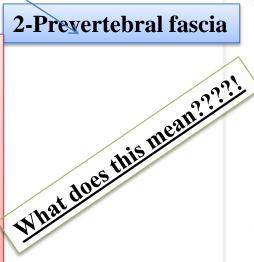

Has the following parts:

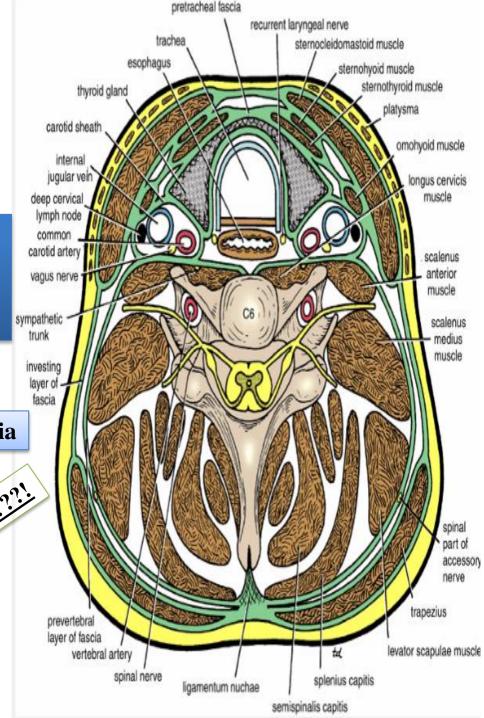

THE INVESTING LAYER

- ➤ Is a thick layer that encircles the neck
- ➤ It splits to enclose the trapezius and the sternocleidomastoid muscles
- ➤ Sends two septa inside the neck

1-Pretracheal fascia

The pretracheal layer is a thin layer that is attached above to the laryngeal cartilages It surrounds the thyroid and the parathyroid glands, forming a sheath for them, and encloses the infrahyoid muscles

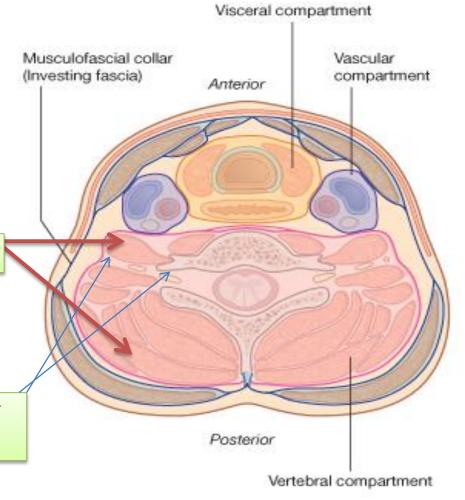

The two septa divide the neck into three compartments

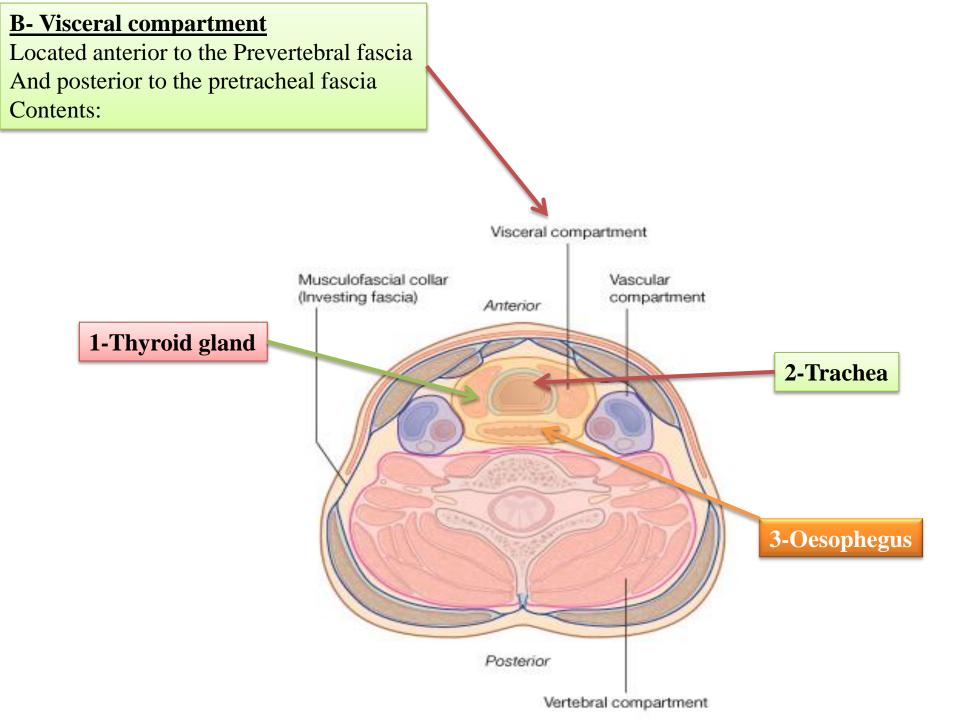

A- Muscular compartment (vertebral)

Located posterior to the prevertebral fascia Contents:

1-Prevertebral and postvertebral muscles

2-Spinal nerves (that shear in the formation of the brachial and cervical plexuses)

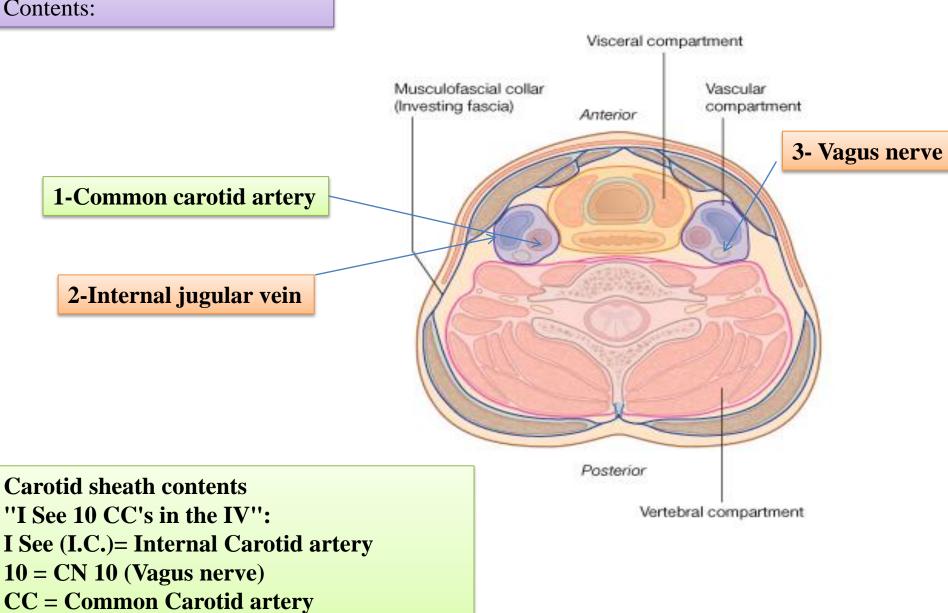

C- Vascular compartment

IV = Internal Jugular Vein

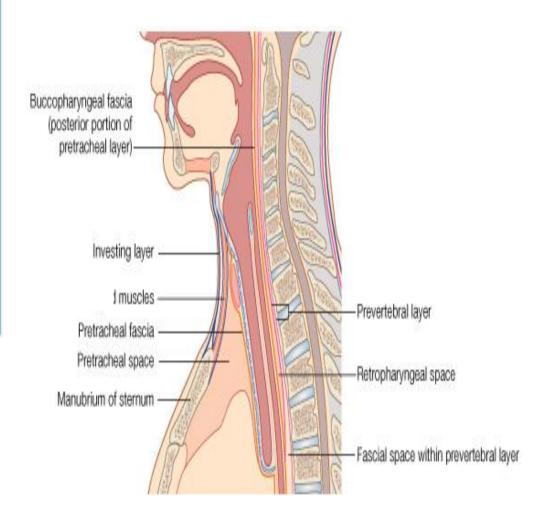

Located Inside the carotid sheath Contents:

The fascial spaces:

- ❖ They are potential spaces filled with loose connective tissue.
- ❖These are clinically important because organisms originating in:
- 1-THE MOUTH
- 2-TEETH
- **3-PHARYNX**
- **4-ESOPHAGUS**

can spread among the fascial spaces, and the fascia can determine the direction of spread of infection

A-Retropharyngel space

- it is an Area of loose connective tissue lying posterior to the **pharynx**.
- The largest interfascial space in the neck which permits movement of the pharynx, esophagus, larynx, and trachea during swallowing

Borderes

Anteriorly

by the visceral (rertropharyngeal)fascia **Posteriorly** by alar fascia (anterior part of the prevertebral fascia)

Commonly regarded as the route through which infections of the mouth and throat reach the mediastinum

Mandible Pharynx Geniohyoid muscle Buccopharyngeal Geniohyoid fascia Investing layer of (deep) cervical fascia Retropharyngeal Fascia of infrahyoid muscles Alar fascia Pretracheal fascia Prevertebral fascia Thyroid gland Subcutaneous tissue Suprasternal space Chronic Infection of the Fascial Spaces of the Neck Manubrium of sternum

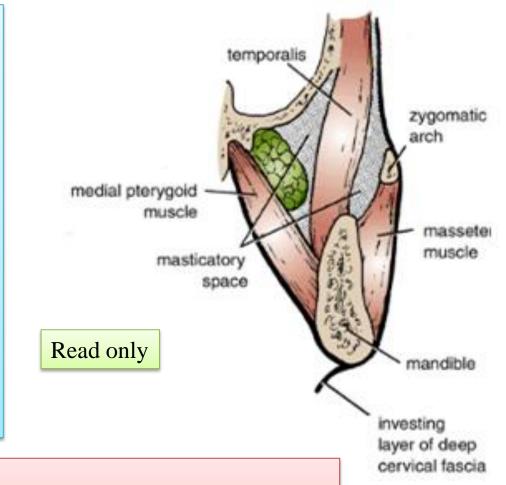

Tuberculous infection of the deep cervical lymph nodes can result in destruction of one or more of the nodes. The pus is at first limited by the investing layer of the deep fascia. Later, this becomes eroded at one point, and the pus passes into the less restricted superficial fascia. collarstud abscess is now present.

B- Masticatory space

• The masticatory space lies on either side of the mandibular ramus and is formed by cervical fascia, which ascends from the neck and splits at the inferior mandibular border to envelop

the ramus of the mandible, the masseter, the medial and lateral pterygoid, and the lower portion of the temporalis muscle.

- ➤It is traversed particularly by the mandibular nerve (V3) and the maxillary vessels
- ➤ Infections from the 2nd or 3rd mandibular molars may spread to these secondary sites

C-Submandibular space

The submandibular space is composed of two spaces separated anteriorly by the mylohyoid muscle: the sublingual space, which is superior, and the submaxillary space, which is inferior.

Ludwig's angina is an acute infection of the submandibular fascial space and is commonly secondary to dental infection.

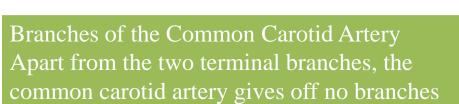

Vascular compartment

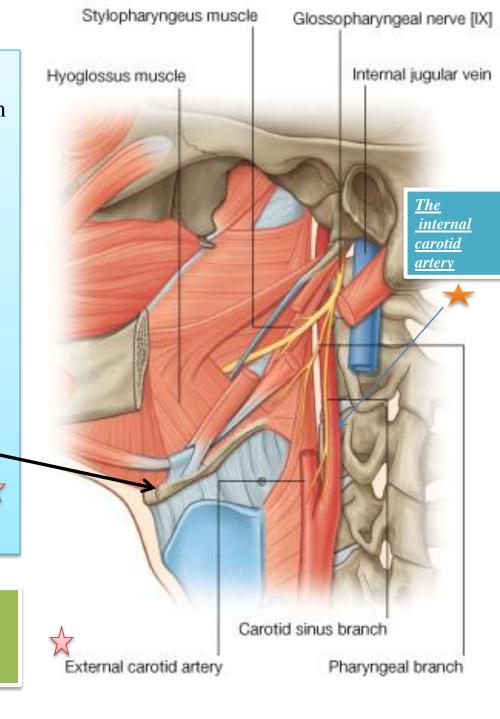

1-Common Carotid Artery

- The right common carotid artery arises from the brachiocephalic artery behind the right sternoclavicular joint
- The left artery arises from <u>the arch of the</u> <u>aorta</u> in the superior mediastinum
- The common carotid artery runs upward through the neck under cover of the anterior border of the sternocleidomastoid muscle
- ➤ At the upper border of **the thyroid**

cartilage it divides into:

- >THE EXTERNAL CAROTID ARTERY
- >THE INTERNAL CAROTID ARTERY

External Carotid Artery

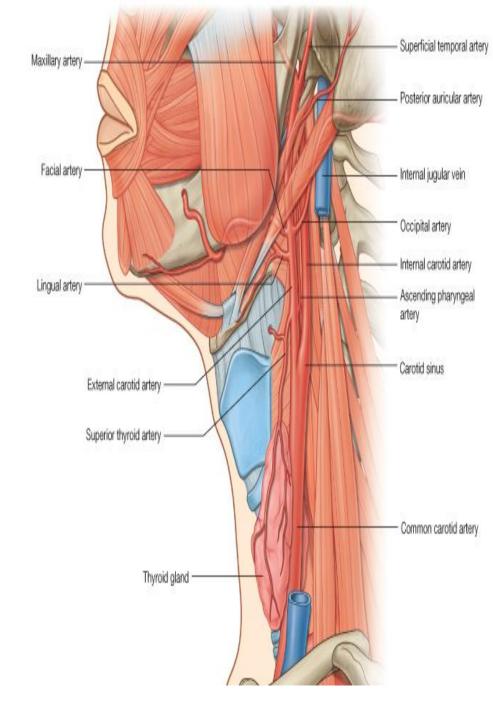

- ☐ is one of **the terminal branches** of **the common carotid artery**
- □It supplies structures in the neck
- 1-Face
- 2- scalp
- 3-the tongue and the maxilla
- **❖**It lies *outside the carotid sheath*
- ❖ The artery begins at the level of the upper border of the thyroid cartilage
 - terminates in the substance of the parotid gland behind the neck of the mandible by dividing into the superficial temporal and maxillary arteries

Its relation to the internal carotid artery

At first

it **lies medial** to the internal carotid artery but as it ascends in the neck it passes

backward and lateral to it

Branches of the External Carotid Artery

External Carotid Artery and Branches Schema

1-SUPERIOR THYROID ARTERY

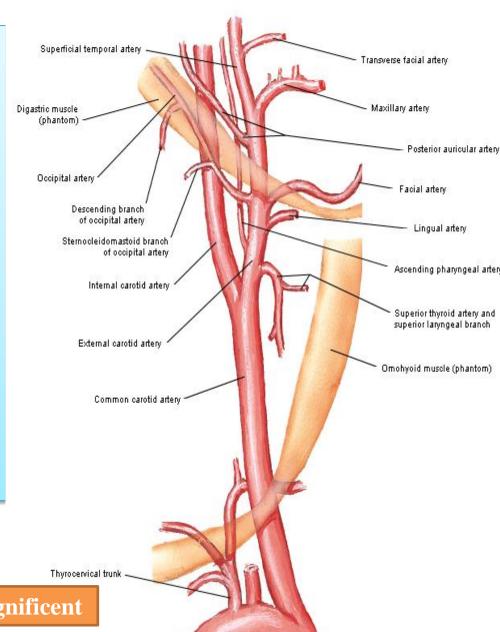

- 2-ASCENDING PHARYNGEAL ARTERY
- **3-LINGUAL ARTERY**
- 4-FACIAL ARTERY
- 5-OCCIPITAL ARTERY
- 6-POSTERIOR AURICULAR

ARTERY

7-SUPERFICIAL TEMPORAL

ARTERY

8-MAXILLARY ARTERY

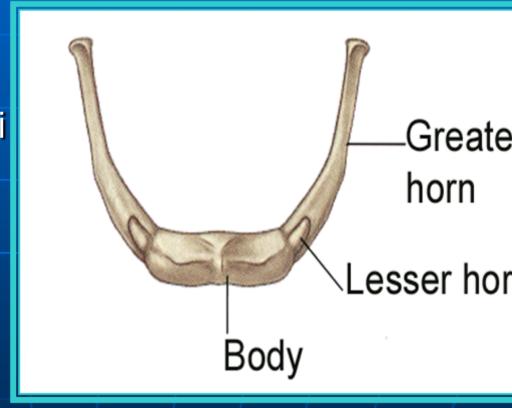

Some American ladies find our Petra so magnificent

Hyoid bone

- U-shaped mobile single bone.
- At C3 level.
- 2nd resistant point after symphysis menti
- Provides attachments for suprahyoid and infrahyoid muscles.

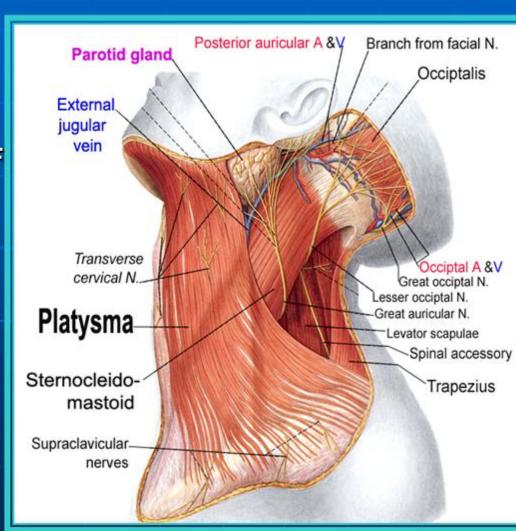

Parts:

- Body
- Two greater horns.
- Two lesser horns.

Platysma

- Origin: deep fascia over deltoid and pectoralis major.
- Insertion: Body of mandible and angle of mouth.
- Nerve supply: Facial nerve.
- Action: Depress mandible and angle of mouth.
- One of the muscles of facial expression.

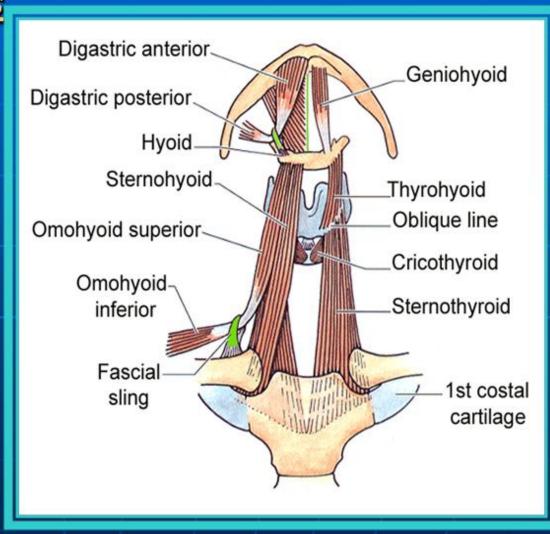

Hyoid muscles

Suprahyoid muscles

- 1. Digastric muscles
- Mylohyoid
- 3. Geniohyoid
- 4. Stylohyoid

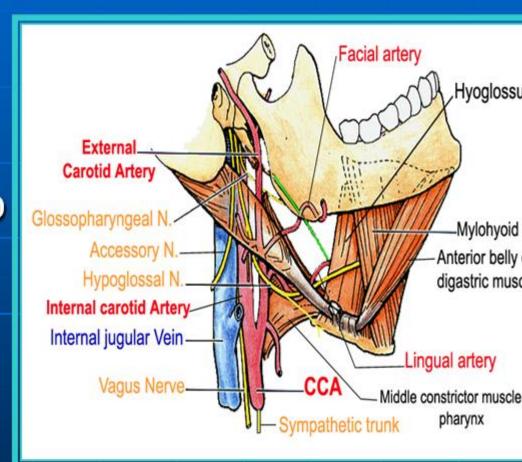

Infrahyoid muscles

- 1. Omohyoid muscles
- 2. Sternohyoid
- 3. Sternothyroid
- 4. Thyrohyoid

Anterior digastric

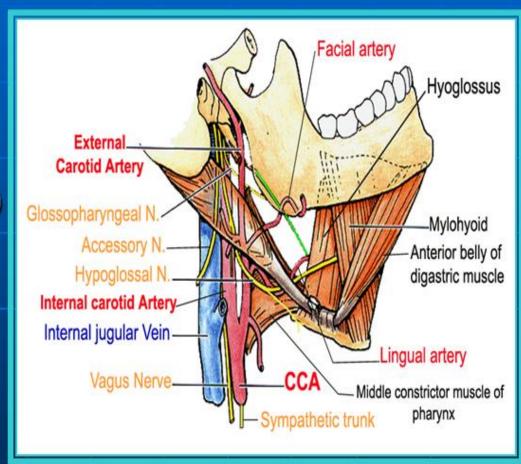

- Origin: Digastric fossa of mandible.
- Insertion: Intermediate tendon attached to hyoid bone.
- MS: Mylohyoid N.
- Action:
 - Elevate hyoid
 - Depress mandible

Posterior digastric

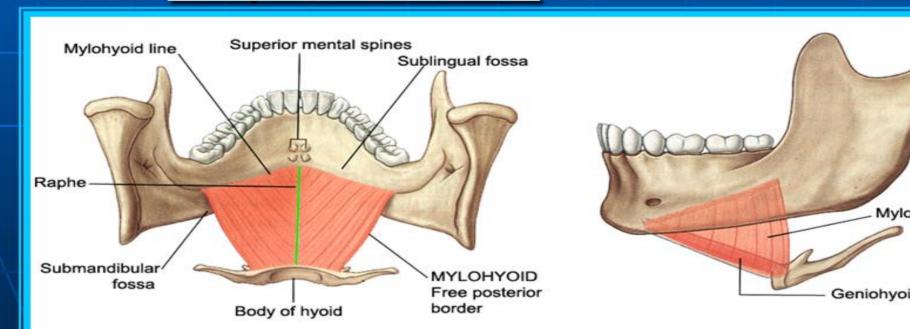

- Origin: Mastoid notch.
- Insertion:

 Intermediate
 tendon attached to
 hyoid
- NS: Facial nerve.
- Action:
 - Elevate hyoid
 - Depress mandible

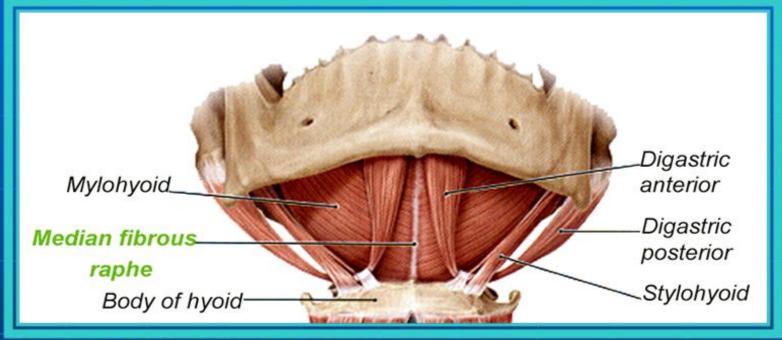

Mylohyoid

- Origin: Mylohyoid line of mandible.
- Insertion: Median fibrous raphe and body of hyoid
- Innervation: Nerve to mylohyoid from inferior alvenerve.
- <u>Action:</u> Support and elevates floor of oral cavity.
 - Triangular in shape with apex forward.
 - Has a free posterior border.

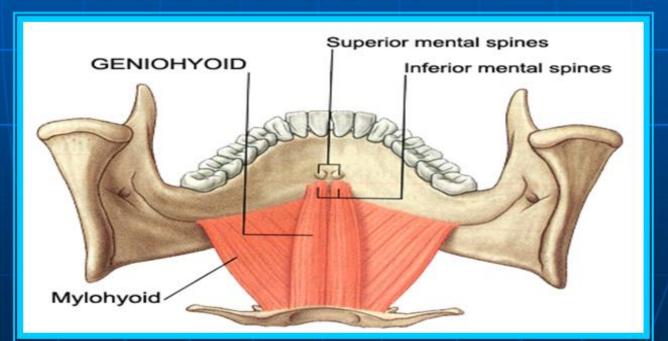

Stylohyoid

- Origin: Styloid process
- Insertion: Body of hyoid
- Nerve supply: facial nerve
- Action: Elevate and retract hyoid

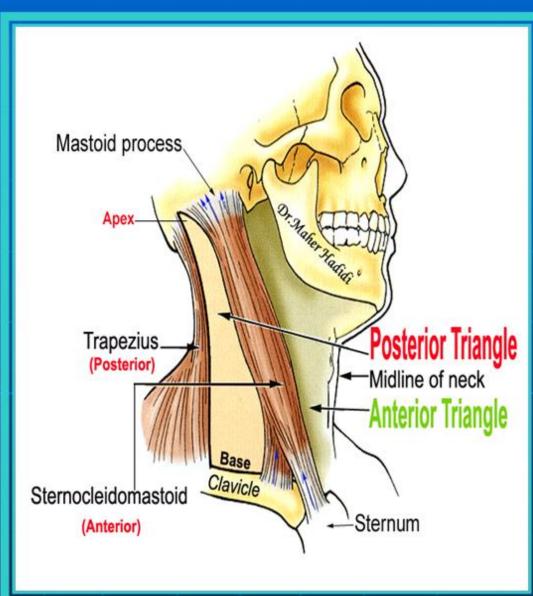

Geniohyoid

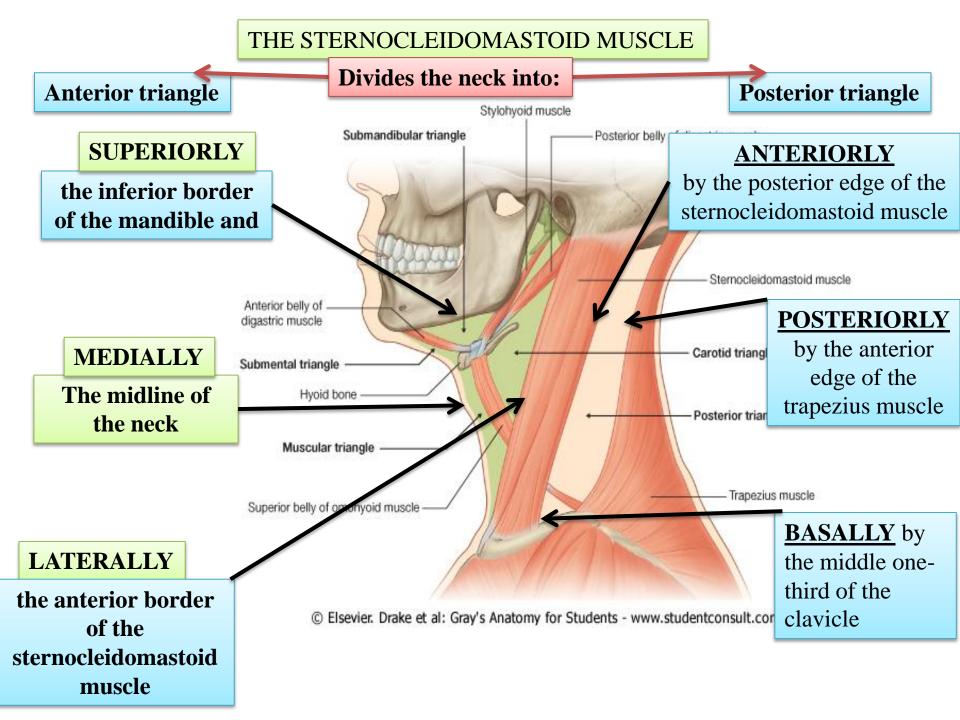

- Origin: Inferior mental spine.
- Insertion: Body of hyoid.
- Innervation: C1 nerve via hypoglossal n.
- Action: Elevates hyoid and tongue.
- Paired on either side of the midline.

Sternocleidomastoid muscle

- Origin:
 - Manubrium sterni.
 - Med. 1/3 of clavicle.
- Insertion:
 - Mastoid process.
 - Occipital bone.
- Nerve Supply:
 - Spinal accessory n.
- Action:
 - Two Flex neck ant.
 - One ■Flex neck to one side, so the ear touch shoulder.

Anterior Triangle of the Neck

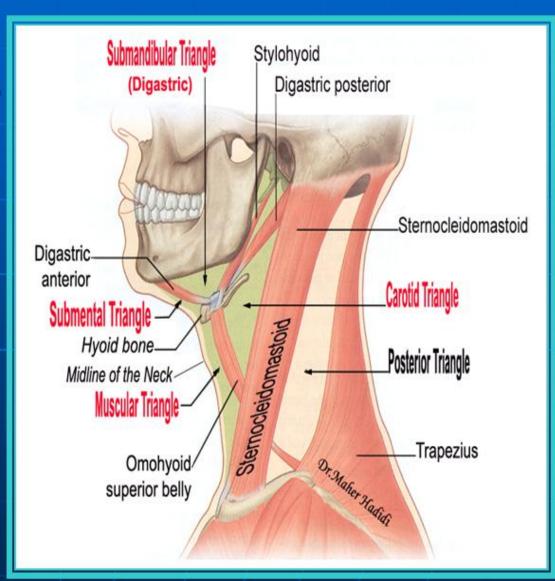

- Borders
- Subdivisions
 - Borders
 - Contents

Boundaries

- Anterior: Midline of the neck.
- Posterior:

 Anterior border of sternocleidomastoid muscle.
- Superior:

 Inferior border of mandible.
- Roof:
 - Platysma
 - Investing deep cervical fascia.

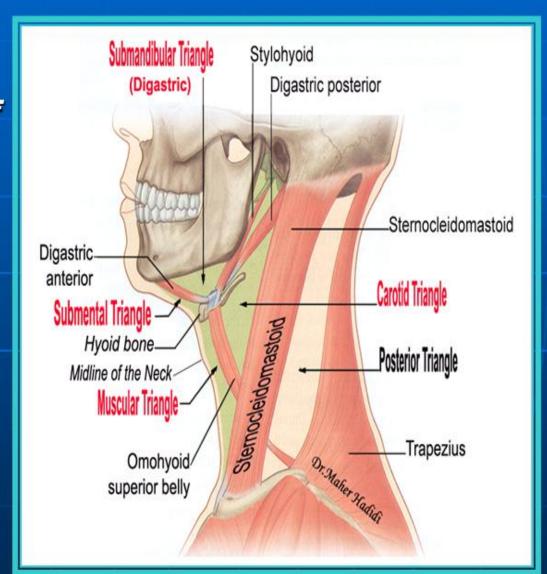

Subdivisions

The superior belly of Omohyoid, anterior and posterior belly of digastric muscle it divides it into:

- Submental triangle
- Digastric triangle
- Carotid triangle
- Muscular triangle

Each has its:

- Borders
- Floor
- Contents

Submental triangle

<u>Borders:</u>

- <u>Lateral:</u>
 Digastric anterior.
- Inferior: Hyoid body
- Medial: Median fibrous raphe.

Roof:

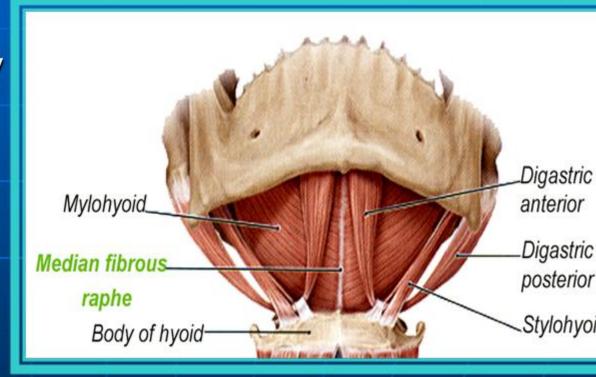

· Skin, Platysma.

Floor:

Mylohyoid muscle.

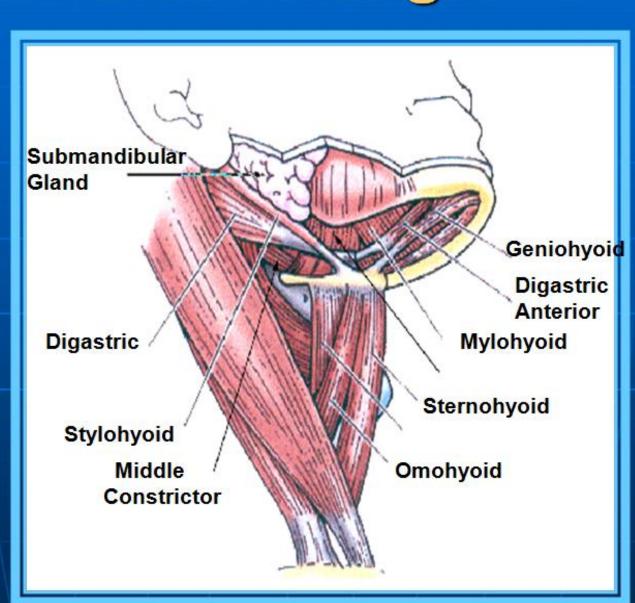

Contents:

Submental Lymph node.

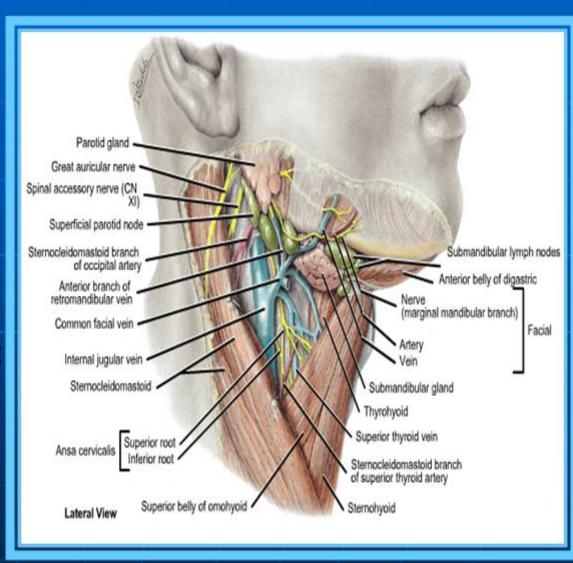

Submandibular Triangle -1

- Borders:
- Roof:
- 1. Skin
- 2. Fascia
- 3. Platysma
- 4. Mandibular branch of Facial nerve
- Floor:
- 1. Mylohyoid
- 2. Hyoglossus
- 3. Middle constrictor muscle of the pharynx
- Contents:

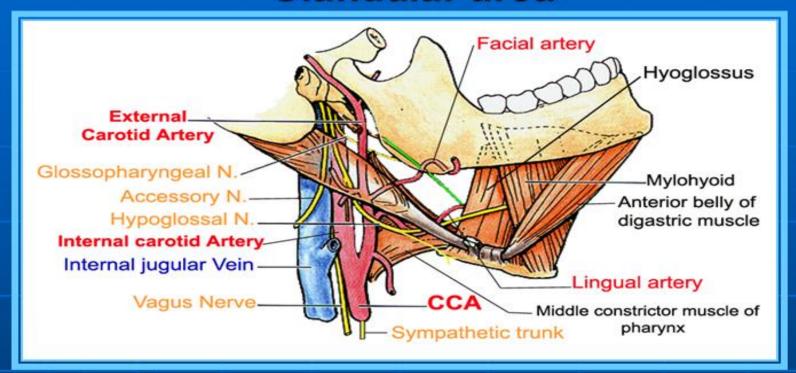

Submandibular Triangle -2

- Contents:
 Occupied mostly by
 submandibular gland.
- 1. Submandibular Gland
- 2. Submand. Lymph Nods
- 3. Submandibular duct
- 4. Facial A,V
- 5. N. to Mylohyoid
- 6. Hypoglossal N.
- 7. Accessory Nerve

Submandibular Triangle

Glandular area

Boundaries:

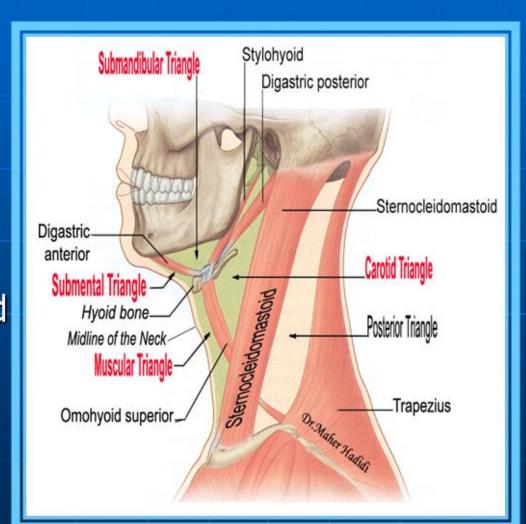

- Superior: inferior border of mandible
- Anterior: Digastric anterior
- Posterior: Digastric posterior

Carotid triangle

Vascular area

Boundaries

- Superior: digastric posterior
- Anterior: Superior belly of omohyoid
- Posterior: Sternocleidomastoid

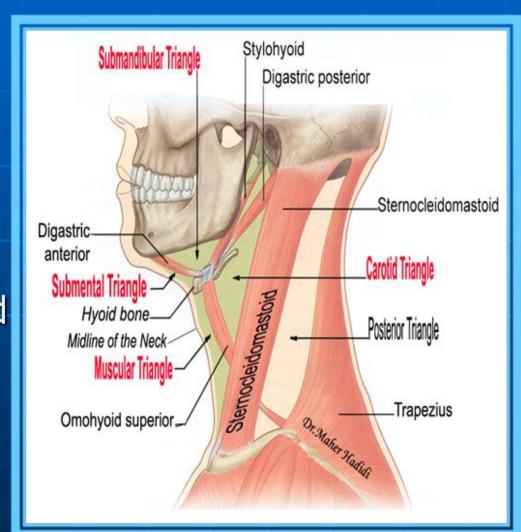

Carotid triangle

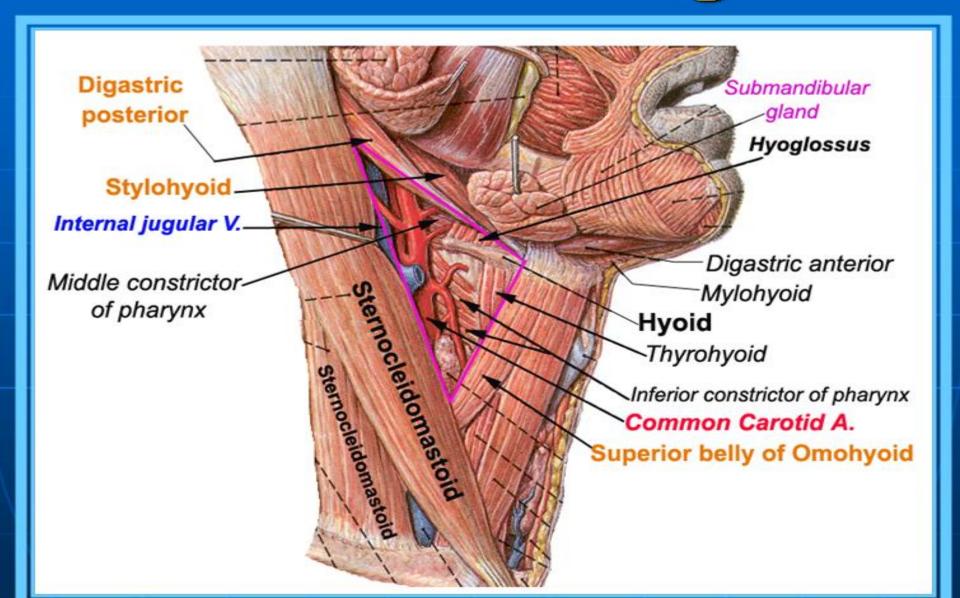

Vascular area

Boundaries

- Superior: digastric posterior
- Anterior: Superior belly of omohyoid
- Posterior:
 Sternocleidomastoid

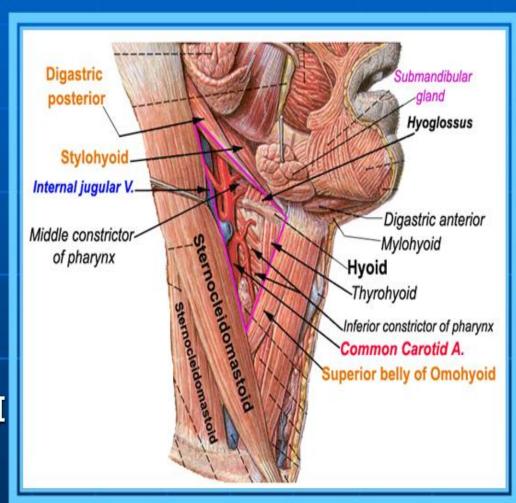

Carotid Triangle

Carotid Triangle

Contents:

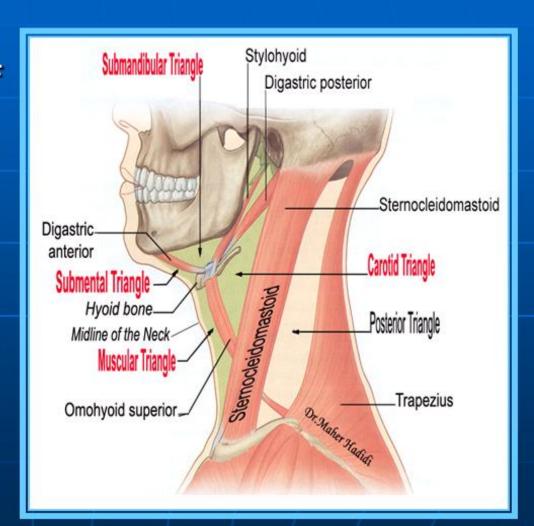

- Common carotid A.
- External carotid A. & its lower 5 branches.
- Internal carotid A.
- Internal jugular Vein
- Vagus nerve CN X
- Accessory nerve CN XI
- Hypoglossal nerve CN XII

Muscular Triangle Muscular area

Borders:

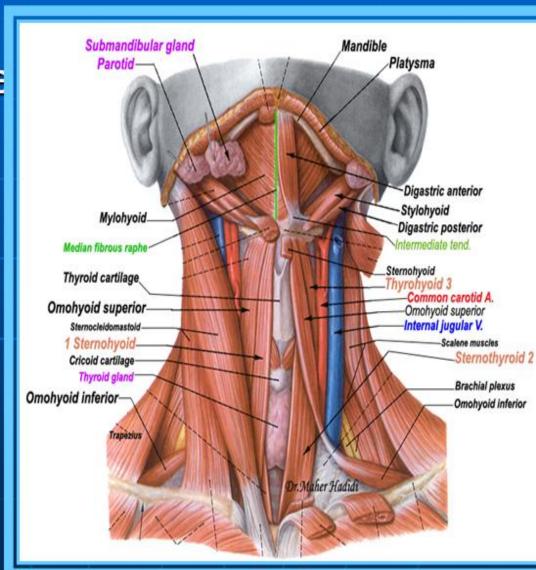

- Anterior: Midline of the neck
- Superior: Superior belly of omohyoid muscle
- Posterior:
 Sternocleidomastoi
 d muscle

Muscular Triangle

Contents:

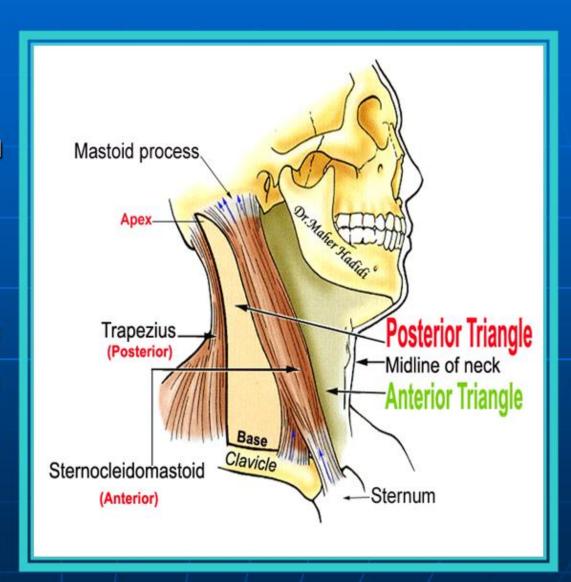

- Sternohyoid muscle
- Sternothyroid M
- Thyrohyoid M.
- Thyroid gland
- Parathyroid glands
- Larynx
- Trachea
- Pharynx
- Esophagus

Posterior Triangle-1

Boundaries:

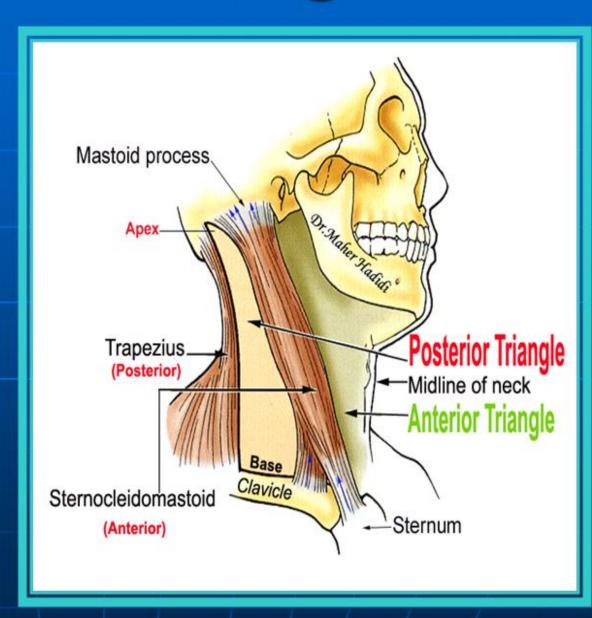

- Anterior:
 Sternocleidoma
 -stoid Muscle
- Posterior:
 Trapezius
- Base: Clavicle
- Apex: Above at occipital bone.

Posterior Triangle-2

- Roof:
- Investing layer of deep cervical fascia.
- Floor:

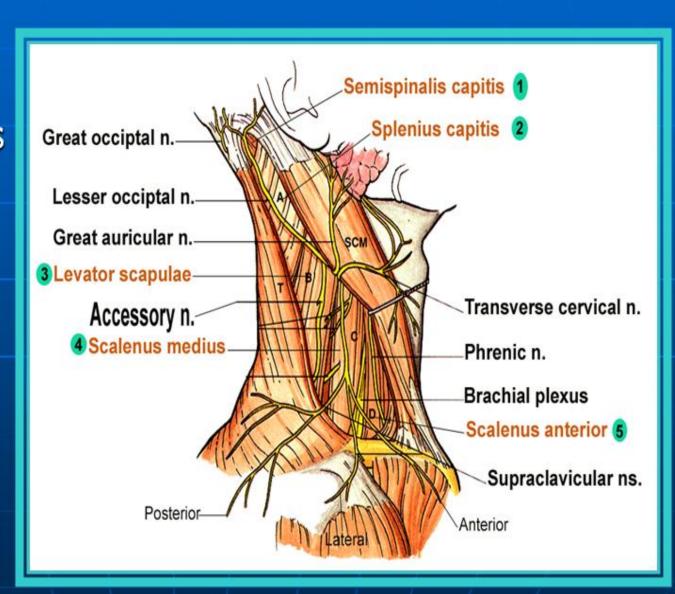

Muscles covered by prevertebral cervical fascia.

Muscles forming the floor-3

From superior to inferior are:

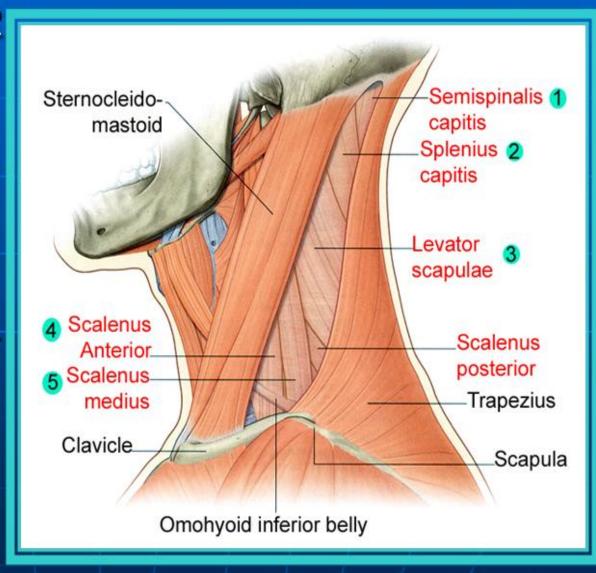

- Semispinalis capitis
- Splenius capitis
- Levator scapulae
- Scalenus medius
- Scalenus anterior

Floor of Posterior Triangle

Muscles forming the floor:

- 1. Semispinalis capitis
- 2. Splenius capitis
- 3. Levator scapulae
- 4. Scalenus medius
- 5. Scalenus anterior

Contents of posterior triangle

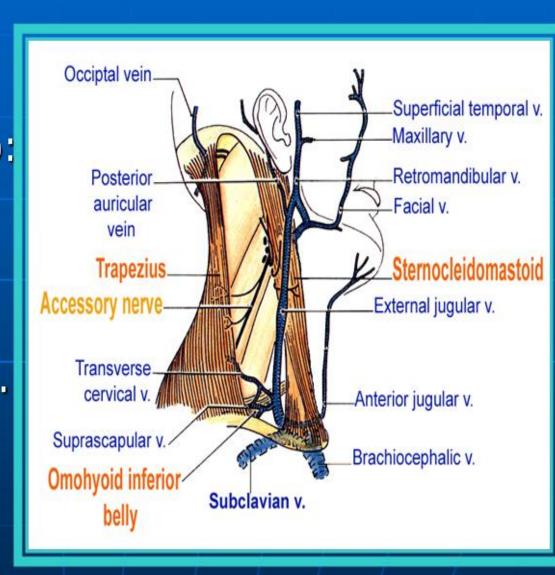

Subdivisions:

Divided by inferior belly of omohyoid into:

- Supraclavicular Δ
- Occipital ∆

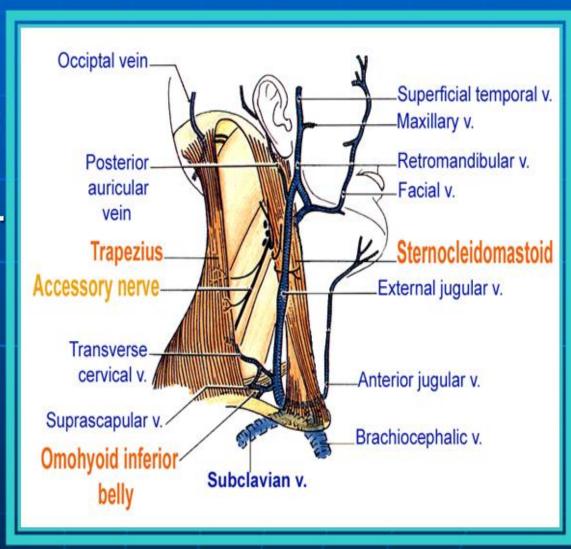

CONTENTS:

- 1 muscle Omohyoid.
- 3 Veins.
- 3 Arteries.
- 4 Nerves.

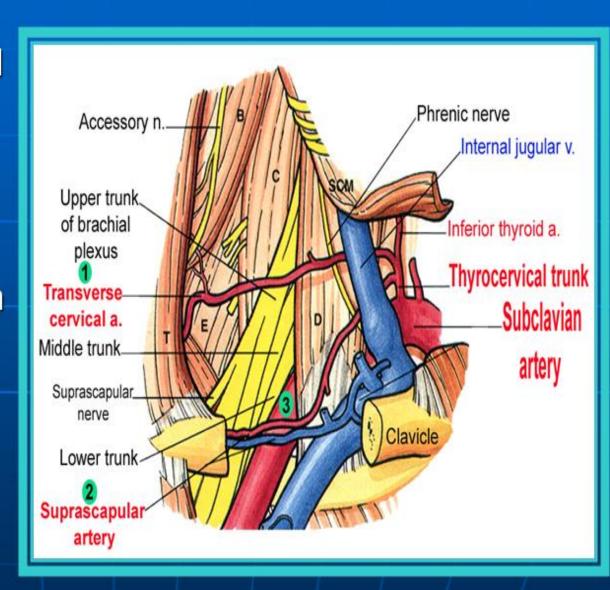

Veins in posterior triangle

- External jugular v.
 - Formed by union of posterior auricular v. and anterior division of retromandibular v.
 - End: into subclavianv.
- Transverse cervical vein.
- Suprascapular vein.

Arteries in posterior triangle

- Transverse cervical artery.
- Suprascapular a.
- 3. Subclavian a. (3rd part).
- (1 + 2)=Branches from thyrocervical trunk → from 1st part of subclavian artery.

Nerves within posterior triangle

- Accessory nerve.
- Brachial plexus.
- Cervical plexus (C2,3,4) and its branches:
 - Greater occipital n.
 - Lesser occipital n.
 - Great auricular n.
 - Transverse cervical
 - Supraclavicular ns.
- Phrenic nerve.
